

FINDHORN COLOUR-RINGED SANDWICH TERNS IN 2014

This is a record of all the colour-ringed Sandwich Terns that have been observed at Findhorn during 2014. The great majority were seen between late July and September. With the exception of a couple of birds seen in Findhorn Bay early in the year, all the sightings were made on the north-west end of Findhorn Beach adjacent to the River Findhorn as it flows into the Moray Firth (NJ027655 / N57.40 W003.38).

There were 116 different colour-ringed birds recorded. The breakdown of this total according to where they were ringed was as follows: 84 from Forvie NNR, Aberdeenshire; 2 from Findhorn Bay, Morayshire; 15 from Inner Farne Island, Northumbria; 8 from Coquet Island, Northumbria; 5 from Blakeney Point, Norfolk; and 2 presumed to be from the Netherlands although no confirmation of their details was obtained.

The total number of Sandwich Terns seen on a daily basis over the months of July, August and September is listed at the end.
